**Evan Deno**
Grade 9
**Advanced Division**

Project Work:
Evan decided to branch out from the type of project work he has done in the past and develop a personal website this year. It took him awhile to determine content-matter for the website, but finally decided to document his growing passion for all things space. He is currently using a web builder (GoDaddy) to develop the site, but hopes to learn how to customize it using .html coding. He has not yet tried to develop a site from scratch. The web builder platform has allowed him to understand the basic structure of websites, how links work, and how to organize pages in a way that makes sense to the user. He does not yet have a published link to his site, but the following are some screenshots taken of the website-in-progress.

He plans to add links to external content as well as some audio/video files to enhance the presentation. He also plans to add several more pages. One key feature of his design is the "Zoom Out Farther" button on each page. The idea behind the site, as the title suggests, is to "zoom out" from earth to learn about the solar system, galaxies, and the entire universe. So, as the user advances to each new page, he will hopefully gain an understanding of the way outer space is designed.

Additional Learning throughout the year:

In past years of the computer project, Evan has completed various projects, ranging from basic coding, editing photos, and Prezi/PowerPoint presentations to building his own computer, which was his project last year. During the past year, he has built another computer that was more in line with his desired specifications. In addition, he has assisted friends with selecting components to build their own computers and has collected parts and built a computer for a friend. He also researches computer parts and is knowledgeable of the latest trends and technologies available. He advises his family members and friends on computer purchases and also troubleshoots various computer issues. The computer project has inspired Evan to learn and grow in his knowledge of computers and has challenged him to learn more skills each year.
